

Behavioral health providers are stretched thin by limited funding, resources, and staff.

And the need for behavioral health services is growing.

1 in 5 adults reported mental illness

60% did not receive treatment

More than 50% of the US does not have enough psychiatrists to meet mental health needs.

1 in 10 adults reported substance use

75% did not receive treatment

Epharmix helps behavioral health providers scale existing efforts to effectively engage vulnerable patient populations.

Individuals need to know someone cares for them when at their lowest. Stretched resources prevent behavioral health patients from receiving the best treatment. Epharmix augments critical outreach to at-risk patients. Automated, evidence-based interventions collect key patient-reported symptoms.

Reach Any Patient
Automated phone calls and text messages collect key patient-reported outcomes.

Know When to Call and Why
Providers see up-to-date data and are alerted to emergent needs between visits.

Informed Outreach
Providers can address needs for at-risk patients using data for longitudinal followup.

Help The Whole Patient
One solution to address common comorbidities.

Select Epharmix Interventions for Behavioral Health

EpxSubstanceUse tracks stress, meals, loneliness, sleep, cravings

EpxDepression tracks mood, PHQ-9 scores, suicidal ideation

Epharmix enabled more efficient patient follow up and better targeting to provide treatment to the right patient, allowing each staff member to see approximately 23% more patients.

- Behavioral health partner's forthcoming publication

“I like knowing that I have support when I feel my lowest. I love this service! It helps me keep track of my moods and to better communicate between my doctor and me.”

- Patient Feedback

Epharmix drove high engagement and lower depression scores at a commercial, self-insured employer:

68% average
engagement over a year

28% decrease
in overall PHQ-9 scores

63% of employees
lowered PHQ-9 scores
